

Version B Assembly Instructions

Assembling Your Units

On your packing list, next to your cage size it indicates what version cage you have and how many sections it consists of. If you have assembly version B, you must follow these instructions.

About Version B Cages

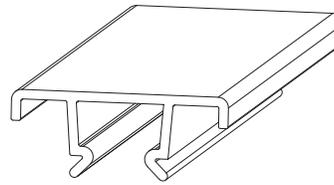

Cages that are version B consist of 2 or more separate sections (each section is like a separate cage) joined by part CCE. The adjoining sides will have no panels inserted, making the 2 or more sections function as one big cage. This makes our enclosures extremely functional for 3 main reasons:

- 1) If you ordered a very large cage, it makes it easy to assemble because you can assemble one section at a time.
- 2) If you have a 2 section cage and wish to separate them, all you need to do is take out the part CCE connector extrusion and insert a side panel on each cage. This will create 2 or more separate cages.
- 3) Any cage can easily be expanded by taking out a side panel and joining another cage to it.

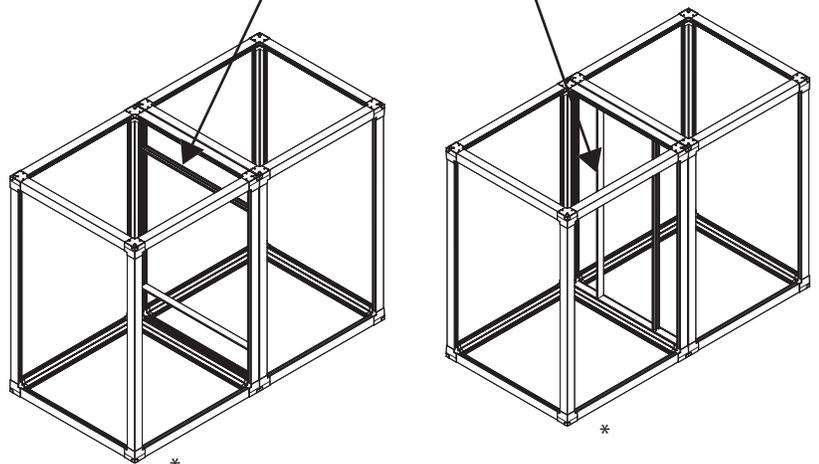

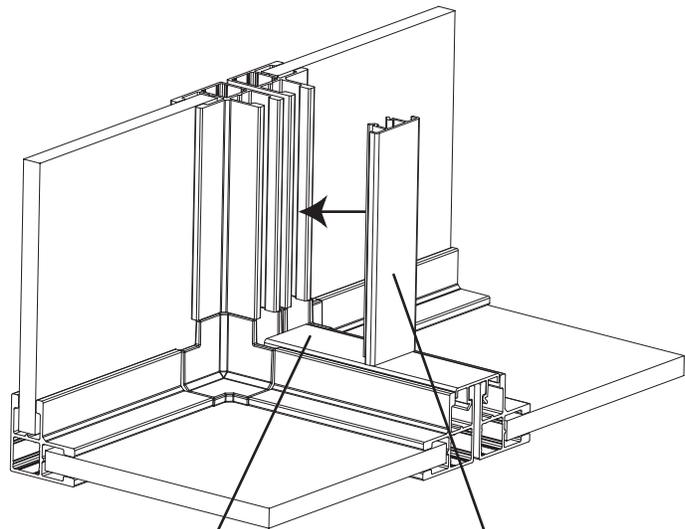

Assembling Version B Cages

Enclosed with your order you should see assembly instructions that say version A. Version A instructions are meant to build a one section cage. To build version B cages, just follow the version A instructions from start to finish for each individual section. Keep in mind, each section will be missing one side panel (if you have more than 2 sections, the middle units will have no side panels). Make sure you install the right side panel on one section and the left side panel on the other so you can adjoin the 2 (or more) sections in the center when you are done.

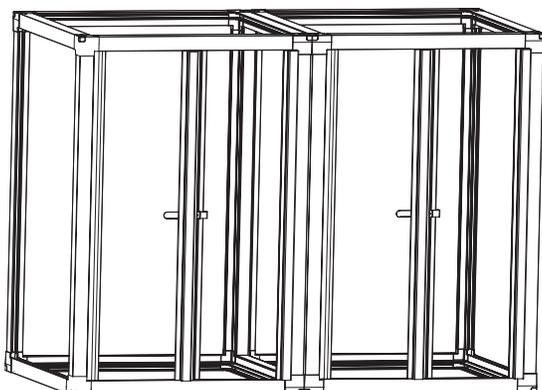

Once you have the sections built, adjoin them using the part CCE plastic extrusion as shown in the illustrations to the right. This part should snap into the 33C aluminum frame members firmly. If for some reason it needs to be removed, it can be pried out with a flat head screw driver. It may take some finesse to come loose, so be careful to do it correctly the first time.

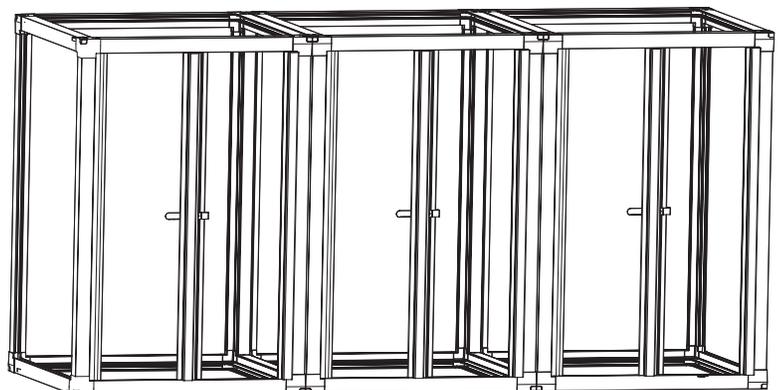

CCE (Plastic)

*Illustrations above has missing panels to more clearly demonstrate insertion of part CCE.
