

# VERSION B ASSEMBLY INSTRUCTIONS

## ASSEMBLING YOUR UNITS

On your packing list, next to your cage size, it indicates what version cage you have and how many sections it consists of. If you have assembly version B, you need to follow these instructions.

### About Version B Cages

Cages that are version B consist of 2 or more separate sections. Each section is assembled like an individual cage and the two sections are joined by part CCE. The adjoining sides will have no panels so that the two or more sections form one large cage. This makes our enclosures extremely functional for 3 reasons:

- If you ordered a very large cage, it is easy to assemble one section at a time.
- If you have a 2 section cage and wish to create 2 separate cages, all you need to do is take out part CCE and insert a side panel in each section.
- Any cage can be expanded by taking out a side panel and joining another cage to it.

### Assembling Version B Cages

Enclosed with your order you should see assembly instructions that say version A. Version A instructions are for assembling a one section cage. Follow the version A instructions to build each section of your version B cage. Keep in mind that each section will be missing one side panel in a two section cage. If you have more than 2 sections, the middle units will not have any side panels. Make sure you install the right side panel on one end unit section and the left side panel on the other end unit section so that you can adjoin the two or more sections in the center when you are done.

Once you have the sections built, connect them using part CCE as shown in the illustrations to the right. This part should snap into the 33C aluminum frame members firmly. If for some reason it needs to be removed, it can be carefully pried out with a flat head screw driver.

CCC  
(Plastic)

The illustrations immediately above have missing panels to allow the viewer to see how part CCE is inserted.
